### THERMOMETER AND HYDROMETER SCALES

The number of degrees between freezing point and boiling point of water is 212—32=180 degrees on the Fahrenheit scale, and 100 degrees on the Centigrade scale. The magnitude of the degrees F. relative to degrees C. is thus as 5 to 9.

$$\text{Temp. C.} = \frac{5}{9} (\text{F}^{\circ} - 32); \quad \text{Temp. F.} = \frac{9}{5} \text{C}^{\circ} + 32.$$

The following formula enable degrees Baume to be converted into Specific Gravity.

$$\text{Sp. Gr.} = \frac{140}{\text{Degr. B.} + 130}; \quad \text{Degr. B.} = \frac{140}{\text{Sp. Gr.}} - 130$$

$$\text{For liquids heavier than water: Sp. Gr.} = \frac{146}{145 - \text{Degr. B.}}$$

$$\text{Pressure of a column of all oil } h \text{ feet high} = p = \frac{61.4h}{131.5 + B^{\circ}} \text{ lb./in.}^2$$
