

ED/ 1367 /70

February 21, 1970

Dear Dr. Mankad:

Thank you for referring the two samples for estimating foetal haemoglobin on whose samples you found increased amounts.

I am giving you below the results:

MR. HARSHADRAI

Alkaliresistant Hb :- 1.52 %

MR. JESUKHBHAI

Alkaliresistant Hb :- 1.39 %

I shall let you know of the in case I find any abnormal haemoglobin on electrophoresis. It would be advisable to send the patients here in future, if they can move about, to enable us to get some details including genetic data. However, I have done these as a special case.

With kind regards,

Yours sincerely,

P.K.S.

Dear Dr Sukumaran.

I am sending herewith two samples of blood whose foetal Hgb. are increased. Both are adults. We have examined repeatedly. The patients are diagnosed as haemolytic anaemias.

I shall be thankful to you if you could oblige to get foetal Hgb done on these samples.

(1) Mr Harshadrai has peripheral smears showing fair no of reticulocytes and 65% of reticulocytes.

(2) Mr Jesukhbhai has marked anaemia with 27% reticulocytes.

These to the the needful.

Our ward boy will come to

Collect the report wherever
you ask him to come.

Thank you again

with regards

your friend

M. K. Lakshmi
