

Liège, April 11, 1937.

Dear Dr. Krishnan,

I have been very pleased to learn from your kind letter that you would be able to come to Liège. The middle of May will be a convenient date as regards the possibility of our meeting there; I expect, however, to leave for Copenhagen about the 20th of May, and from the 15th to the 20th I will probably be busy with examinations. But, of course, there will still be plenty of time for conversations and discussions. Everybody in our small circle of physicists looks forward to meet you, especially my friend Brasseur. We also hope that you will accept to hold one or two lectures at your convenience; in which case you would oblige me to communicate ^(to me) as soon as possible, together with the date of your coming, the title or titles of these lectures, as well as your eventual preferences as to the days and hours to be chosen for them. I will of course be glad, if you think it may be of any help to you, to arrange for your hotel accommodation.

Looking forward to meet you,

Yours sincerely

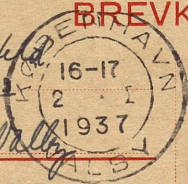

L. Rosenfeld

Dear Chandra,

Just a few words about Krishnan. I shall of course be very pleased to meet him. As to the time, you should tell him, first of all, that Bohr, who is sailing for America and Japan on the 20th of January, will not be back at Copenhagen before June. As for myself, I am returning to Belgium with the whole tribe (!) on Jan. 15th. and staying at Liege until about May 15. I will be pleased to see Krishnan either at Liege or at Copenhagen or at both places successively. There is one circumstance which would perhaps be worth telling Krishnan about Liege: my friend Brasseur there, a crystallographer, has been interested in Krishnan's work, and I even remember having discussed some of it* with Brasseur. So if Krishnan could afford on his trip to stop at Liege, it would in any case be a pleasure not only to me but also to a specialist who has made a deep study of his (Krishnan's) work. We could eventually arrange a lecture by Krishnan at that occasion. So please tell Krishnan all this, and that I will be pleased to hear of his coming anyhow and do my best to assist him. As for you, again good

* on paramagnetism of crystals.
