Dear Sir Kariamanikkam Krishnan,

I should welcome your help on an application for Fellowship from Dr M.P. Madan who is at present on the research staff of the Massachusetts Institute of Technology, but from 1953 to 1955 was a lecturer in physics at the University of Lucknow. His research has been on the properties of gases. From 1951 to 1953 he states that he was engaged in research on a State Government research project "Separation of isotopes by thermal diffusion".

If this candidate is known to you or you could easily obtain an opinion about him, I should welcome your comments.

Yours sincerely,

*N. Clarke*

N. Clarke  
Deputy Secretary.
