

Three major questions:
 Birth of the Universe.
 his life organized
 his conscious world.

1. Who are all interested in Consciousness Studies
2. Definitions of Consciousness. Indian vs Western.
 Concept? Pure? Process?
 (Semantics) (Multiple drafts)
 Do Plants, Animals have Consciousness
 Sciartze - Crick's hypothesis
3. Mechanisms of Consciousness - Neuro Sciartze Difficulties
 Limitation and Acknowledgment.
4. Other States of Consciousness -
 In what way Neuro-Sciartze Studies should proceed in India
5. Physics and Transcendence. - Should Neuroscientists take a Q for this?
6. Emergence - Does it advance the field by calling it emergent.
7. Spinoza - Einstein - Universal Intelligence. - Oneness.
 Reality, Truth and Consciousness.
8. GeoCentric - Heliocentric - Acentric. View of the Universe
 (Ptolemy) (Copernicus) (Einstein)

Some problems may exceed our cognitive competence

- Process = Temporal Successions of objective states.
 = (Objects + Time)
- The experienced Now is not a point, but extended (approx 3 seconds)
- If we do not want to postulate the existence of a homunculus in the brain overseeing synchronization in the mass activity generated by the synchronized activities of neurons has to be functionally effective. What could be an appropriate experimental paradigm to study the functional relevance of coherent oscillating phenomena

 in
 Conscious
 Experience

- Cognitive studies make 'homogenous' Unavoidable holistic for them or for that?
- The chief idea of Multiple Drafts model (MDM)
 - no temporal anomalies.
