Dear Krish, I have just received on my return from a Hollaender course held in Chile your greetings for the coming new year. This is something that fill my heart, as you nicely wrote in the card. I am always so happy to receive news from you and your daughters. I know that your life is a sort of everyday battle to go ahead for them but especially for you, and therefore when I see that you are succeeding is a great joy for me. Thank you for your card I really appreciated.

Here life is busy as usual, trying to get professional successes whitout loosing anything on the personal side of the life ! This is the great challenge ! I don't know when I can come to India. However, I will try give you something to think about. IN these last few years I have put together a residential course on the use of genetiv biomarkers in human population studies. I gave the course in Spain, Colombia, and A new course has been planned for next August in Cuba. This is a course for young investigators and PhD students, mixing Genetic, statistics, epidemiology, cytogenetics, etc. (a program of last year course in Barcelona uis attcahed for your knowledge). I give this course by my self wich is about 20-25 hours in 4-5 days. This year I will give the course in Spain in June and in Cuba in AUGust. Perhaps we could consider to have a 2008 edition in Mumbai. The course if quite cheap, since it costs only my personal expenses, and if the situation is problematic, like this year in Cuba I payed by myself the cost of travel. Just think about that, it may be a good opportunity to visit you and do something useful. Generallu the course if for 20-30 persons.

I do not remember if I have already sent you the pdf of the paper on MN

and cancer in press In Carcinogenesis so here is attached also this file.

Best regards to all of you. Ciao, Stefano .

My dear Krish, how are you ?

I have not received news from you for a while. Are you at work ? still involved with MN ?

I wanted just inform you that we have finally published the paper on MN and cancer (a copy of the manuscript still in press is attached), and that we are planning a comparison study for the exfoliated assay. We will discuss this issue in ANtalya (Turkey) next May.

Best regards, Stefano

Too heavy, I had to remove pictures, S:

Hi Krish, is always a great pleasure to hear from you !
Find attached a pdf copy of the commentary, and a pre-submission version of the review paper that we have written on the MN in exfoliated cells. This latter document is for your private use only, since it has to be submitted yet. Best regards, and best wishes for all your projects,
Stefano

PS If you visit the www.HUMN.org website you can register and being informed of all initiatives of the project.

Subject: Launch of the new International Project HUMNxl
Part(s): 2 Invitation_Letter.doc application/msword 95.11 KB
3 Questionnaire.doc application/msword 282.58 KB

Dear colleague,

a month ago we sent you some material concerning the launch of the the new project HUMNxl on the micronucleus frequency in human exfoliated buccal cells. We selected your name among those expressing interest for the HUMN project, or from the literature, choosing the authors publishing papers on this assay. The material included a letter describing the rationale and the objectives of the project, and a questionnaire asking for methodological and epidemiological information from your past experience.

We collected many questinnaires as a result of the first delivery, and now we are ready to proceed with the analysis of the available material. However, we realized that some of yuo may have not received the first message, or may have postponed to reply. Therefore we decided to circulate again the questionnaire and the invitation letter, to leave 15 days more to those who are interested to participate for submitting the questionnaire to the HUMNkx steering committe.

If you have already submitted the questionnaire sorry for the repeatition, if you are not interested in the project sorry for bothering one more time (this will not happen again)

Best regards,

Stefano
