30 Wednesday
AUGUST

Try out web http daemon at
~~nvjtmpoo~~ nvjtmpoo/cern/

430aug
p31aug.

Contd. from 31 Aug -

13. Move httpd.conf → httpdoo.conf

14. Chge server root → nvjtmpoo/cern/

ps - s + httpd → sthttpdback

make a background job.

16. Kill the background job after
obfery ps - x

17. Restore server root to webman

18. Copy httpd, sthttpdback &
httpd.conf to /webmanoo

(i.e., one level up)

19. Edit ~~httpd.conf~~ sthttpdback
works ok

20. Copy exec. files to upper subdir.

To me news

- ① Environment variable NNTPSERVER to be defined to IP address of server.
- ② /usr/local/lib/xm/server will be read otherwise
- ③ To find ~~for~~ news server in the local domain(!)
- ④ NNTP server ~~can~~ is set up to know about at least one server.
NNTP server manager needs to find another server to feed news
