Sir K.S.Krishnan FRS  
Director, National Physical Laboratory New Delhi India

Dear Krishnan,

I am writing to recommend Mr S. C. Prasad who has just finished his work for a Ph D under my supervision. I expect he will be awarded the degree in October. He is returning to India on August 30th and expects to take up his duties as a lecturer in the University in Bihar from which he came in 1952. He would prefer to have a post with more opportunity for research work and I wish to let you know that he is available.

He has developed considerable skill as an experimenter in dealing with metallic single crystals by various xray and other crystallographic methods. He has used Geiger counters and the associated electronic equipment and also carried out quantitative photographic measurements using a microdensitometer. His basic knowledge of theory relating to this same field is also good. His personal qualities are excellent and I am sure he would be a good member of a team or a ~~great~~ trustworthy individual worker.

With warmest greetings

yours sincerely
