ZOOLOGICAL SURVEY OF INDIA,
INDIAN MUSEUM.

Calcutta, the 27th November 1934

Telegraphic Address :
"Zoology, Calcutta."
Telephone No. Regent 513.

My dear Krishnan,

I have to thank you very much indeed for the loan of "The Physics of Solids and Fluids" by Ewald, Pöschl and Prandtl. I have read portions of it with considerable advantage. The sections dealing with "Eddy Formation" and "Prevention of Eddy Formation" have thrown considerable light on the structural adaptations of the torrential fauna, especially fish. With this, I am sending a copy of my paper on the 'Ecology, Bionomics and Evolution of the Torrential Fauna' and shall be highly grateful if you will kindly read the section dealing with the 'Physics of the Mechanism of Attachment' (pp.249-263) most critically and favour me with your suggestions. After reading the book you have loaned me, I find that I can improve this section, but I want someone to read portions of the book with me. Will you be able to spare a morning or an afternoon for this purpose? I shall ever be grateful for your kindness.

Hoping to be excused for the trouble and with my kind regards,

I remain,
Yours sincerely,

S. L. Hora

Dr. K. S. Krishnan,
Indian Association for the Cultivation of Science,
Bowbazar, Calcutta.
