FROM:

PROFESSOR W. L. BRAGG.

TELEPHONE: ARDWICK 2681

Dear Prof. Krishnan,

I am sorry we were not able to continue our conversation on Monday last as we had hoped. I forward herewith a sample of pentaerythritol tetraacetate. The crystals are quite unsuitable at present but good specimens are easily obtainable from an aqueous alcoholic solution by evaporation in a CaCl_2 desiccator. I hope they will prove suitable for your work in which I am very interested.

With best wishes,

Yours sincerely

Thomas W. Goodwin.
