

Indian Association for the  
cultivation of Science.  
210, Bowbazar Street.

My dear Professor,

According to your instruction I am sending herewith the absorption spectra of Naphthalene solid solution in Anthracene. Pure Naphthalene crystal has got ~~three~~ absorption lines at 4850, 4530, 4230. Anthracene solid has a continuous absorption bands. From the plate it is evident that Naphthalene has sharp line absorption.

Pure Anthracene crystal has fluorescence bands at 4025, 4220, 4375, 4950.

From Prof Banerjee I came to know that the Hon Examination of BSc students of the Dacca University would be held in the month of July. So, I expect you here then. I shall be highly obliged if you kindly send any more suggestion on the subject - or on any other subject. With best regards.

yours  
sincerely  
Satis Ch Ganguly
