Dear Dr. Gadagkar,

Kindly recall the discussions my colleague, Dr.S.Ayyappan had with you on 28 July 1994 regarding the modelling of data on aquatic ecosystems. This Institute is operating a World Bank-funded project on 'Bioenergetic pathways and their optimisation in fish pond ecosystems', the main objectives being quantification of nutrient and energy budgets, characterisation of energy pathways and their optimisation for increased production efficiencies. While data on several abiotic and biotic parameters are being collected from pond ecosystems under different management practices for comparative evaluation, further development of models for forecast, simulation and interactions need to be done. It will be very kind of you if your expertise is provided for developing the software to prepare models for aquatic systems. I request you kindly to indicate the actual modalities of this collaborative effort, for making further arrangements.

With regards,

Yours sincerely,

M. Ranadhir

Dear Niranjana,
Pl. let me know
if you are interested
in collaboration with
this Inst.
Thanks
