

Berkeley House  
Cawnpore. 15.12.

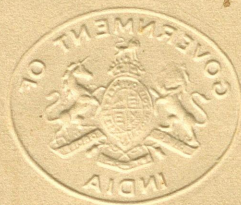

Dear Prof. Krishnan

In reply to your note of the 9th. inst. I have returned to you today by registered parcel post the three volumes you so kindly lent me last April. I found Ramanujan specially interesting and inspiring but I have to confess that I was as lost in Albert's Modern higher algebra as a coolie in a thick jungle.

If it be possible for you to lend me

Bragg's. Nature of crystals

I should be one more  
very grateful to you.

At the same time  
if ever the "What is Mathematics"  
by Courant came your way, will you  
be good enough to lend it to me  
also.

Thanking <sup>you</sup> for your kindness, past,  
present and future and hoping to  
get a chance to go to Allahabad  
and see you one day amongst the  
days

With my kind regards  
Yours sincerely

Paul Wally
