From Darkness to Light

Many Schools

One Experiment

Many Signs

One Sun

Many Faiths

One God

Many Races

One Human

Many Cultures

One Nation

Many Nations

One World

Many Problems

One Resolve

**Let's come together
to build a better world.**

HOW TO DO THE EXPERIMENT

Hold the card close to the ground, in the sunlight. Examine the shadow cast by the card. You will see the various signs on the card projected on the ground.

Now slowly raise the card towards the sun as high as possible. The different signs all become the same. They all become circles of light, circles of our broadening understanding.

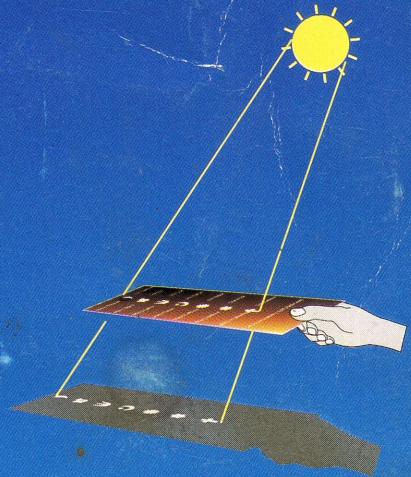

As you go higher and higher, the circles touch each other, an expression of unity, of coming together, of our essential oneness as human beings, as citizens of secular India and as citizens of planet earth.

WHY?

This is not a miracle, but a scientific phenomenon. The circles of light that you see are all **images of the sun**. Therefore 'Many Signs, One Sun'. They are round because the sun is round. This effect is known as pinhole projector.

"Many schools, one experiment" refers to a wonderful experiment in 2012. On the 6th June 2012, will occur the exceedingly rare "Transit of Venus", which can be seen by anyone who knows how to image the sun. On that day any student will be able to measure the distance of the sun

from the earth by simple experiments. This experiment is one of the group of experiments to measure how far to the sun.
