

My dear Krishnan,
You will remember Pramatha Halder, an ex-pupil of the Dacca University, who wishes to make representation to Government and prays for a redressment of certain wrongs he suffered during the last regime for his political opinion and activity. Kindly go through his application, and if possible forward to the proper quarters for consideration. Halder is naturally anxious to work in the technical staff.

in the defence department,
preferably as an assistant
works manager, which is
not an unjustifiable hope, as
he is well-qualified in
theoretical science, and has
also a mechanical training.
Hope this finds you in best
of healths
Yours sincerely
Lubbock

PHYSICS LABORATORY
DACCA UNIVERSITY.

Dated, Ramna, the.....

My dear Krishnan,

I received your letter in due course:

I postponed writing to you as I thought I would be able to visit you when I passed through Calcutta for Nagpur:

but unfortunately I ~~did~~ ^{could} not even halt for a day in Calcutta, but had to return to Dacca as soon as possible: I

shall fix the date proposed formerly for the examination as you agree. We shall all like to have you in our midst for as long as you ~~can~~ ^{would} conveniently stay: So come as early as you can. You will perhaps be interested in some of things we are trying to do here. How is your work getting on? Dr. Raghavan is bracing himself for his American tour by daily morning walks, and he visits me occasionally in the mornings. How are the children and Mrs. Krishnan? I heard that you passed anxious days for her some time ago. I hope she is now completely ~~improved~~ ^{and recovered}.

I do hope things are getting smoother for you in Calcutta -
I get no news now-a-days.

Apropos of the Fluorogelatin, Pratilal wants to do the
magnetic measurements himself, as he wants to submit thesis
making as complete a study of isomorphism from the various
physical stand-points. So I shall be grateful if you kindly give
him instructions regarding magnetic measurements when you
come down here. The X-ray work is going on satisfactorily
in spite of untoward accidents. We seem now on the road
towards understanding the technique of the crystal-structure determination.

The Heisenberg Weissenberg camera is still unfinished as yet:
And Jogin bahu is taking his own time over the affair. Have you
tried your camera, and how are your photographs? I met
Dr. Ganesan and passed an interesting time in Nagpur.

With best wishes,

Yours sincerely
Subbaro
