THE OBSERVATORY
KODAIKANAL OBSERVATORY P. O.
S. INDIA.

15th November 1935.

Dear Prof. Krishnan,

You may be aware that at the forthcoming meeting of the Indian Science Congress in Indore, it has been arranged to hold a joint discussion between the Sections for Physics and Chemistry on "The Strucure of Molecules". I should be very glad if you would take part in the discussion, and I would suggest, if I may do so, that you speak on the aspect of "Molecular Structure and the Raman Effect". I am sure that a contribution from you on this subject would be welcomed by all.

As it is likely that there will be a number of both physicists and chemists who will desire to take part in the discussion, it will be necessary to limit the time for each speaker. I suggest that about quarter of an hour would be a reasonable time limit.

If you will agree to take part in the discussion, I should be glad if you would be good enough to send me a brief summary of what you intend to say, so that printed copies may be made available to members present. A copy of the summary to W. D. West, M. A., 27 Chowringhee, Calcutta, would save some time in printing.

Yours sincerely,

T Royds
