

Clarendon Laboratory, Oxford

22nd February 1934

Dear Professor Krishnan,

I am interested to see from your letter to Nature of the 3d of February that you have measured the magnetic anisotropy of graphite by a different method. I do not know if you contemplate measurements on organic compounds, but venture to send you a reprint of a letter to Nature, describing the possible importance of such measurements, in case you are interested in this subject.

yours sincerely,

A.R. Ubbelohde
