Subject: Invitation to IC Scientists

I am taking this opportunity to inform you that because of your productivity and scientific achievement our international science awareness system - Index Copernicus - has identified components of your professional career, which are publicly available on the Internet. Please note that we pay the highest attention to the accuracy of the records found on the internet as we provide these data analysis services to a number of scientific institutions and organizations throughout the World. Index Copernicus provides these special services, in part, for individual scientists. This is performed by the calculation of **Personal Impact Factor** * and **Hirsh Index** **, search and networking for Worldwide research collaborators and personal information delivery [literature, grants, patents], based on professional profiles of scientists such as yourself.

Because you have reached a level of professional recognition and awareness, membership and the information services are free of charge to you. At this time we would be grateful for your evaluation of your own record, possible correction and/or completion of the data. Should your professional record be extensive [and therefore time consuming to add], please send your up-to-date curriculum vitae in reply to this message and our staff will take care of the rest. We would appreciate any additional comments and /or remarks which will help us in building this valuable service.

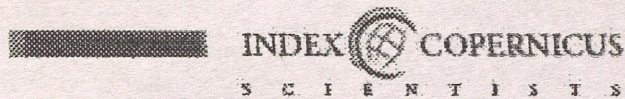

To activate your account at Index Copernicus please click here https://scientists.indexcopernicus.com/account_activate.php?code=ypUmeloHdKzYuMa

Should you have any questions please do not hesitate to contact me at any time,
sincerely yours,

Mark R Graczynski, MD PhD
C.E.O.
Index Copernicus International, PLC
415 Madison Ave.,
14th Floor
New York, NY 10017
U.S.A.

(*) Personal Impact Factor calculation is based on a similar principle that journals impact factor is calculated by Thomson Scientific.

() Hirsh Index** - The index is based on the distribution of <http://en.wikipedia.org/wiki/Citation> citations received by a given researcher's publications.

Scientists Networking and Evaluation Service Worldwide Scientific Infrastructure

The aim of this web-based scientific infrastructure and communication platform is

- **For Scientists/Professionals:**
 - effective communication and worldwide exchange of information between scientists
 - integration of different sources of information on literature, grants and patents
 - personalized information delivery of information based on scientists keywords and research profiles
 - worldwide scientists networking based on research profiles
 - web-based infrastructure for management of multi-center research projects
 - scientific/professional job vacancies personal delivery
- **For Administration:**
 - multi-parameter analysis of scientific output and research potential, both institutions.
 - Career evaluation system and institutions benchmarking: research potential in administration index
- **For Industry:**
 - Worldwide search for scientists
 - Head hunt for research group leaders
 - Industry-based international research projects management
 - Intellectual property transfers
 - Worldwide search for new promising technologies
 - Research job offers for industry

Join now the rapidly growing professional system for scientists.

Index Copernicus Scientists is currently patent pending technology at the US Patent Office.

IndexCopernicus™ Confidentiality Statement and Legal Note

1. Index Copernicus databases and information services are not shared with any outside parties. All databases are protected from any type of unauthorized intrusions. Index Copernicus information services are provided solely for use of our clients, who determine the extent of information they provide and who are responsible for its use. In short, we maintain the strictest confidentiality regarding the information our clients provide.
2. Index Copernicus databases and information services are the intellectual property of the company and are protected by relevant legal regulations. Unauthorized use, distribution, copying or modification is not allowed.
