

II ZAKŁAD FIZYCZNY UNIWERSYTETU STEFANA BATOREGO

Nr.

Wilno, dn. 29th November 1938.  
Nowogrodzka 22, tel. 18-96

Dear Profesor,

since I have in view to investigate the fluorescence of "green"chryzene and of "green" naphtacene, I should be very much obliged to you for sending me some informations about the receiving of single crystals of greater sizes from alcoholic solutions.

If you had by chance some needless crystals and if you could send me any one, I should be too much obliged to you, since it facilitated remarkable my investigations. You will kindly keep my expressions of greatest estimation.

Yours faithfully

*Eugeniusz Skorko*
