REF:

Dear Professor,

We have reached Kuala Lumpur and are settling down gradually. The University has provided us with a house. The place is very pleasant though exceedingly humid and warm.

Although I have some work at hand I can spend quite a lot of time in research. I will like very much to complete the 3rd part of our work. If you have found those notes regarding the longitudinal oscillation you may kindly send them to me. There is also some calculation of a similar type made by Brown in the Handbuch der Physik, vol on dispersion.

I shall wait for your letter and instruction.

With respectful regards

Yours sincerely
Sanat.
