Dear Dr. Ranganayaki:

Thank you for your letter of 5th Dec. 1976, which I found upon my return from a trip abroad. I am sending you by separate mail several of our recent reprints in the field of chemical evolution.

The experiments you describe sound extremely interesting. I shall appreciate receiving a reprint of your paper in *J. Brit. Interplan. Soc.*, 23, 813 (1970). The only related work (yet unpublished) which we have done here is on the photochemistry of dilute aqueous formaldehyde (0.01 to 0.1 molar), which by irradiation at 254 nm yields glyoxal and other aldehydes.

You and your husband might be interested to hear about the XXth Meeting of COSPAR (Committee on Space Research) which will be held 7-18 June 1977 in Tel Aviv. I include a copy of the program with my reprints.

With best wishes for a Happy New Year.

Yours sincerely,

*M. Halmann*
