BOMBAY.

Ref:- Letter HVG/6028/65.

Dear Mr P.K.Sukumaran.

I am very glad to received your letter and blood report of my family.

I have received a letter for Dr, Frando but now the time my son Anwar is under treatment of Mr Dr. Razia Rahemtulla. Therefore I saw your letter to her. She inform me about your letter.

She inform me that you are require last donor blood whose blood given last six month. But she was sorry to said that thereis no perfect donor blood specialy of one person but many person blood changes likely Patan PUNJABI each. And they did not note any detail of donor.

Indeed she will write you a letter and discussed about the treatment of my son Anwar. and detail inform will send to you.

My son Anwar is doing well. I hope you will help us of you sucessively treatment

5 August, 1965.

Your Ref. No. AVG/6027/65, dated 30/7/65-

Dear Dr. Sukumaran,

This is regarding patient-

Anwar - male, 3 years, S/o Ismail Ahmad  
Baqarawala, Karachi - this patient

was referred to you by Dr. P.M. Udani  
for investigations of haemolytic anaemia.

Your letter was addressed to Dr. Fernando,  
but the patient's father has given it to me  
today, as this patient has been under my  
treatment since February 1965.

We see quite a few cases of Cooley's

Haemina & as our investigations here did not show Gastral Hb, I had referred the case to Dr. P. M. Udani when the family went to Bombay.

I think there was some mistake when the reports were given to you. I have now verified from the previous doctor & he says that the blood given to him was never twice from the same donor.

Each time it was from a different donor & it will be difficult for them to send the samples of blood to you.

I have seen the reports given to the patient's father by you & I had written to Dr. Udani thanking him for all he had done for this patient.

I am extremely grateful to you for

Dr. Razia J. Rahimtoola

(3)

The interest you have taken in this case  
• if you can do further investigations  
to arrive at a diagnosis, it would  
help us a great deal.

Before coming to me this patient was being  
treated by Dr. Ferrando at Seventh Day  
Adventist Hospital, at Karachi. I could  
• not personally contact Dr. Ferrando, but  
the other doctor who is in charge of the  
records has informed me that this child  
did not get blood from the same donor.  
Recently this child's spleen has enlarged  
considerably & he needs blood transfusion

(4)

every 3 wks. I have suggested -  
splenectomy, as I feel this is a stage  
of "hyperplenism" & whatever the type  
of Hemolytic anaemia, this child will  
improve after splenectomy to a certain  
extent.

Some of our cases of Cooley's Anaemia  
have improved after splenectomy & a few  
can even do without blood transfusions.

Kindly send me further reports & give  
your opinion.

With regards,

Yours sincerely,  
R. Hakim S. A.
