Professor Dr.

Sir Kariamnikkan Krishman

Royal Institution
Albemarle Street 21
London/England.

Dear Professor Krishman.

I have written a preliminary letter to the Nobel committee and I am going to Oslo to morrow where I hope to se the chairman C.J.Hambro.

Nobody is elected yet, but it may still be too late this year. Then it must be tried for the next term and it would be very important if You would kindly support us with some biographical material etc.

I hope You are now well established at the Royal Institution in fine progress with Your work. I should be grateful to have some reprints by and by, especially if You have published anything about Your recent idea on the electron waves in metals.

Myself I am very unhappy not to have any accomodation in Trondheim where I got a professorship 2 months ago. I will send you reprints when I have unpacked, I think I had better send them to India when You are travelling ?

With many greetings

Yours sincerely

Harald Wergeland
