

TRINITY COLLEGE,
CAMBRIDGE.

It is possible that there may be
something, in multiple Dirichlet series,
in working out lines of summability,
convergence, etc., corresponding to the
various possible methods of summing

the series: $\sum_{n \leq x} \sum_{m \leq n} \dots$, $\sum_{n \leq x} \sum_{m \leq n} \dots$, $\sum_{(m,n)}$, etc.
~~Yours sincerely~~
