Dear Professor Krishnan,

Very many thanks for your kind letter from Amsterdam. I am very glad that evidently you had your suitcase restored to you. I still remember with pleasure the few hours I had the privilege to talk with you.

With respect to your visit I should suggest that you should stay a few days in Engelberg, a place which is not too far away from Zurich and very pretty. I shall write to Prof. Bär and he will advise you about the Hotel, as I have never stayed there for any length of time. I mostly go Mountain climbing somewhere in the Engadin, but I think that is too far away for such a short visit. I shall with the same post write to Mr. Bär and ask him if he can put you up. It will save you money which can be more profitably be spent on other occasions than Hotel bills.

I shall also send you some reprints, one about salty stuff like NaCl and one about Magnetorotation, which experiments were ment as a start and should have covered paramagnetic salts and ferromagnetic films. But then I left Switzerland for Cambridge to smash atomic nuclei.

With the best of wishes for your visit to my country and scientific luck

I am Yours sincerely

E. Bretscher.
